JTC POCKET RAM SAFETY INSTRUCTIONS

- 1. Warning all manual breaching actions place the end user at risk of serious and permanent injury. All operators of the JTC-POCKET RAM must read and understand the instructions below. The JTC-POCKET RAM should only be used by operators who have read and understand the instructions provided. All operators must wear eye and hand protection as well as any other protective equipment they deem necessary for the operation.*
2. Maintenance: The JTC-POCKET RAM must be maintained like any other piece of equipment. The operator must remove any loose debris prior to using. The operator must inspect all handles and the body for any bumps or burrs that may have developed while being used. If any burrs are located, use a file to remove and smooth the area.
3. Ramming Technique: The Pocket Ram is designed to be used as a traditional ram. With one exception like everything JTC designs we wanted to do more with less. Hence the ram has a built-in dead blow that results in extra energy placed into the strike and reduces bounce back. Having said that the Pocket Ram should not be struck against immovable objects and all steel heavy training doors that do not flex and yield like a real-life door does. It is suggested to have your back to the hinges of the door when feasible while completing the ramming action. The operator should attempt to ram open the door by striking as close to the lock set and or sets. The operators can also strike north and south in the center of the door multiple times causing a crease that will then force the door open by causing separation from the lock sets.

4. The Pocket Ram is 25 lbs in total weight and therefore will not create the same amount of force that our 40 lb Wedge Ram produces.
5. ***Warning: Any fortified door will take more the one strike to defeat. Failure to strike an inward opening door without your back facing the hinges may result in serious injury or disfigurement to the operator hands and forearms.***
6. Striking any wall and or immovable object will result in blow back I.E., the return of energy placed upon the object.
7. Warning any motion such as swinging, twisting and rotating of hips and other body parts while holding onto the Pocket Ram can result in injury and or disabilities from such action.

***** WARNING – YOU ARE USING EQUIPMENT FOR FORCIBLE ENTRY, HUMAN RESTRAINTS, AND OTHER TACTICAL APPLICATIONS. ALL USERS DO SO AT THEIR OWN RISK AND ACKNOWLEDGE THAT JERSEY TACTICAL CORP. SHALL BE HELD HARMLESS FOR ANY AND ALL CLAIMS OF INJURY, SERIOUS INJURY, OR EVEN DEATH.**
